

PhyMed Partners with WPC Healthcare to Provide Health Analytics Platform

Nashville-based companies work together to propel anesthesia towards value-based care

NASHVILLE, TN – (October 13, 2015) – [PhyMed Healthcare Group](#), a physician-led and owned leader of anesthesia and pain management services, today announced its partnership with [WPC Healthcare](#), a provider of predictive analytics solutions for healthcare. Together the partnership integrates data from disparate systems and organizes the data into an aggregated data repository necessary to perform reporting and analytics on selected quality measures and then delivers insights through a rich visualization layer. In addition, the solution includes a comprehensive reporting module that includes self-evaluation, assessments and peer-reference capabilities, as part of their ongoing commitment to clinical excellence.

PhyMed will leverage WPC's [Taproot Cloud](#) platform to help streamline existing systems, data and workflows, improving productivity and mitigating risk, while enhancing quality care delivery. As the healthcare industry transitions to a value-based care model, organizations must be able to report quality improvements over time, which means they need access to comprehensive reporting and analytics to report on key metrics. The partnership between PhyMed and WPC Healthcare will make it easier for PhyMed's partners to benchmark, measure, report and improve quality care.

"PhyMed is dedicated to being a leader in quality care in the anesthesia space. The partnership with WPC Healthcare is going to help us continue providing the highest quality services to our partner organizations, in line with our overall strategic commitment to achieving clinical and operational excellence," said Sami S. Abbasi, president and chief executive officer of PhyMed Healthcare Group. "A critical component of realizing that excellence is achieving meaningful measurement. WPC's platform provides us with a comprehensive reporting and analytics suite for both internal and external use."

"Through Taproot Cloud, PhyMed has access to actionable intelligence such as quality data required for PQRS reporting," says Ray Guzman, chief executive officer of WPC Healthcare. "Our combined capabilities provide the insights needed to solidify their leadership position for health analytics for the anesthesia specialty. Not only does this allow them to meet business goals, but it also allows their partners to access a sustainable, cost-effective service delivery positioned for continuous growth and improvement."
